Sole Proprietorship _____

Partnership _____

Corporation _____

For partnerships and corporations, please indicate the nominee's percentage of ownership _____

Are you under any legal or regulatory action? If so, please explain.

What % of the product sold from your business is actual production from your farm?

From your financial statements, on an accrual basis, please indicate the following ratios based on your primary agricultural production. Please note over 50% of the farm's income, averaged over the past 3 years, must be derived from the farm's primary production.

- a) Current Ratio*- all current or short term assets to all current or short term liabilities
- b) Debt to Assets Ratio*- all assets to all liabilities. (short, intermediate & long term) This includes any business related debt to family
- c) EBITDA* - Earnings Before Interest, Taxes, Depreciation, Amortization
- d) Retained Earnings

* Ratio Explanations:

a) Current Ratio: Current assets are the assets of a business expected to be converted to cash or used up in next 12 months or within the normal operating cycle of the business. Current liabilities on the other hand are the obligations of a business which need to be settled within next 12 months or within the normal operating cycle.

Current Ratio = $\text{current assets} / \text{current liabilities}$

b) Debt to Assets: Determine the total debt of the company. Calculate the total equity, or assets, of the company. An asset is defined as anything of value that could be sold or otherwise converted into cash. Divide the liabilities by the equity. This is the percentage of debt to assets.

c) EBITDA: Earnings Before Interest, Taxes, Depreciation, Amortization

d) Retained Earnings = Revenue – Expenses (excluding interest, taxes, depreciation and amortization)

	Then (Initial Year of farming)	Now (Current year of financials)
